About Dataset

Description

This dataset contains information on domestic violence against women in a specific rural area of a developing country. The data is collected to help understand the correlation between various socio-economic factors and domestic violence.

Dataset Content

The dataset includes the following columns:

SL. No: Serial number of the record.

Age: Age of the respondent.

Education: Educational attainment of the respondent(tertiary for higher secondary).

Employment: Employment status of the respondent.

Income: Income level of the respondent (0 indicating no income).

Marital status: Marital status of the respondent (married or unmarried).

Violence: Indicates whether the respondent has experienced domestic violence (yes or no).

Context

Domestic violence against women is a significant issue in many developing countries. Understanding the factors that contribute to this violence can help in creating effective interventions and policies. This dataset aims to provide a basis for analysis and research in this critical area.

Inspiration

The dataset can be used to:

Analyze the correlation between education level and domestic violence.

Study the impact of marital status on domestic violence.

Explore the age distribution of domestic violence victims.

Identify potential socio-economic factors contributing to domestic violence.
